

To transition from a fossil fuel-based culture to a renewable energy based community we need to enable change on many levels...government, corporate, local and individual. Across the world, communities are taking the lead, actively promoting change by holding events that reinforce each other, generate momentum and show people how they can make a difference.

That's why the Energy Innovation Co-operative is hosting a

## **Paris <1.5° Active Hope Event**

Let's get together to share and spread our collective ideas for practical and innovative change.

### **Event details**

**Date:** World Environment Day, June 5th

**Time:** 9.30 am to 1 pm

**Venue:** Outtrim Hall

A local produce morning tea and lunch will be provided.

Donations to help cover costs are invited.

Active hope represents the practical steps and easily adopted changes that people can make in their lives when faced with an uncertain future. Climate Change presents the challenge of an uncertain future but there are many practical and innovative ideas that we can integrate into our lives that will contribute to a hopeful future.

Facilitated conversations at tables of 6-8 people will enable sharing and learning about Active Hope steps we are each taking. Opportunities for spreading these steps across our communities will be explored. We will also showcase a great innovation in the energy sector - Solar Gardens – and explore what is needed to create an innovation like this in our region.

**Please RSVP to [info@eico-op.com.au](mailto:info@eico-op.com.au) or 5657 3108**

We can co-design a hopeful future. To do so requires a collective effort. So if you are inspired to participate in this event, please come with activist intent.
